description

QTIP (Quantitative Timing and Investment Positioning) is Maiden Century's platform specifically designed for quantitative investing. Spotlight is Maiden Century's data discovery and recommendation engine for identifying and evaluating alternative investment opportunities. Maiden Century's KPI marketplace as a standalone product. Users are able to buy estimates on a ticker or KPI level. OSCAR is Maiden Century's fully integrated data solution for corporates to access real-time data on their ecosystem. The default landing page for users, shown as the Maiden Century icon at the top left. It contains a handful of widgets to help you get started. Identify companies at the greatest risk of beating or missing upcoming earnings. Curious if any dataset covers a company, brand, app, domain etc? Search here. Tap our Precast powered forward period estimates to understand guidance risks. Access our growing repository of documents and white papers. Companies with the greatest share price moves in recent days. Find charts built by you - or your colleagues - within myIDEA. Quick tips to help you get ramped up with the platform as a new user. Tell us how we're doing. It's the only way we're going to improve. Request training, feature walk-throughs, UI queries or identifying interesting data. A widget that shows the user his/her 6 most recently searched tickers. Instantly look up publicly listed companies covered by IDEA. See who's reporting, customized to your preferred watchlist. Catch up on new datasets, companies under coverage and modeled KPIs. A page where users can find actionable ideas on a top-down basis using the information that is presented in the N. A page where users can find actionable ideas on a top-down basis sorting by largest positive/negative deltas and f. A page where users can find actionable ideas on a top-down basis using preset criteria such as Delta, Estimate Rev. A page where users can find information about backtesting results, forecasts, and other relevant information on a Cohort-configurable visuals for the selected dataset/cohort providing deeper qualitative context. Sidekick allows u. This chart tracks year over year (or year over two year) growth rates for the dataset + cohort combination selecte. This is similar to the 'Data abs. change' chart, except it measures changes in % as opposed to absolute values. Give. This is similar to the data growth chart, except this looks at absolute changes in value as opposed to a % change. F. Our legacy IDEA ensembled MAPEs view each dataset's accuracy independent of others - the lower the historic M. The toggles are for different types of statistical models, each of which carry their own biases and strengths. The tc. The stack chart displays the distribution of selected data over the course of each year, to help users understand th. This table provides several ways to benchmark different datasets in terms of their ability to accurately track and p. We begin forecasting metrics up to 180 days ahead of company earnings, and as a general rule, our forecasts star. The Historical Performance widget compares reported, consensus and predicted KPI values for recent periods. M. D.I.Y stands for Data Input Yourself. Once the feature is enabled, it allows IDEA users to create new proprietary da. The Historical Spread table compares the growth rates of the selected KPI from the 'Metrics' dropdown to those r. AI-generated commentary providing key insights based on data analysis. It evaluates consistency among highly we. Our Napkin Math widget demonstrates the potential differences in expectations between investors who utilize ou. A key feature of the IDEA platform is the ability to aggregate and blend various data sources and numerous mode. A widget that suggests ideas based on historical correlation over the past 6 quarters. You can clip any chart that is made in MyIDEA to automatically load up for a ticker and/or specific kpi on the Ticke. If key input costs are growing faster than sales, chances are this will lead to margin compression. Examples of cost. Forecast for the current period. Studies the historical relationship between top line surprises and subsequent surprises to reported gross profit. In. Relates inflections in top line momentum to similar inflections in gross profit. To the extent some costs are inhere. When inventory turnover (defined as CoGS / ending inventory) starts to decline, a period of margin compression c. Forecast for the next period. Mix changes can sometimes be indicative of margin changes. Examples could be the mix of online to offline sales |

The segmental approach analyzes year-over-year changes in the segment mix, focusing on how shifts in the contribution of each segment to total revenue affect the overall growth rate.

A widget that shows the model weights for our ensemble estimate IDEA

A page to quickly see trends for up to 5 datasets across different dimensions. y/y, y/2y, etc. This page is only available for users with the appropriate permissions.

A page to quickly see trends for up to 5 datasets across different dimensions. y/y, y/2y, etc. This page is only available for users with the appropriate permissions.

A page that has information about all the datasets on our platform including dataset meanings, coverage information, and more.

A page to easily uncover variations in estimates across different types of data sources, dataset cohorts or statistical models.

A page to create or edit watchlists. Watchlists can be used in Screens and for setting up email alerts in the Alerts section.

A page to configure the Email Alerts a user gets

A page that allows users to rank and sort companies based on various metrics and criteria

A page for generating and accessing various reports and analyses

A page to view and manage user entitlements, dataset access permissions, and feature availability

A comprehensive data visualization workspace where users can create, organize, and collaborate on custom charts and dashboards.

BYOM stands for Build Your Own Model. It's a feature that gives users the ability to build custom forecasts based on their own data and models.

Summary view of all Build Your Own Model projects, showing model performance and key metrics

Interactive interface for building custom forecasting models using proprietary data and IDEA methodology

Tool for bulk uploading historical KPI data to create custom forecasting models at scale
